POLISH - NIGERIA BUSINESS COUNCIL

2026 STRATEGIC PLANS

Bridging Markets: Advancing Poland–Nigeria Trade, Investment & Innovation Partnership.

Foreword

BY CHAIRMAN, BOARD OF DIRECTORS

H.E Chris A. Akomas, PhD, FNIM

It gives me great pleasure to present the 2026 Strategic Plan of the Polish–Nigeria Business Council (PNBC). This document represents an important milestone in our journey to strengthen the economic, cultural, and educational relationships between the Republic of Poland and the Federal Republic of Nigeria.

Over the past two years since the establishment of the Council, we have made meaningful progress in building bridges between businesses, institutions, and policymakers in both countries. Poland stands today as one of Europe's most dynamic and resilient economies, while Nigeria remains Africa's largest market with immense opportunities in trade, industry, technology, agriculture, and infrastructure. The convergence of these strengths creates a powerful platform for mutually beneficial cooperation.

The Polish–Nigeria Business Council was founded on the belief that strong economic partnerships are built on trust, collaboration, and shared prosperity. Our role is to serve as a credible gateway through which investors, entrepreneurs, and institutions from both countries can explore opportunities, build partnerships, and unlock new markets.

The 2026 Strategic Plan sets out a clear roadmap to deepen these engagements. Through targeted initiatives such as bilateral trade missions, investment forums, membership expansion, cultural exchange programs, and the launch of a digital business platform, the Council seeks to facilitate meaningful economic linkages and encourage sustainable investments across priority sectors.

A central focus of our strategy is the promotion of private sector–led partnerships that can drive innovation, industrial growth, and job creation. By connecting Polish technology, manufacturing expertise, and innovation with Nigeria's vast market potential and entrepreneurial dynamism, we believe that both countries can unlock new levels of economic cooperation.

This strategic plan also underscores the importance of people-to-people engagement through cultural and educational exchanges, which remain vital in fostering long-term relationships and mutual understanding between our nations.

As the Board Chairman, I am confident that the implementation of this strategy will position the Polish–Nigeria Business Council as a leading platform for bilateral economic cooperation. However, the success of this vision will depend on the collective commitment of our members, partners, governments, and the wider business community.

H.E Chris Akomass, Chairman BOD, PNBC and Justyna Sitaska,Head, Poland Trade & Investment Office Lagos Nigeria

I therefore invite investors, entrepreneurs, policymakers, academic institutions, and development partners to join us in advancing this shared mission. Together, we can build stronger economic bridges, unlock new opportunities, and create lasting prosperity for both Poland and Nigeria.

On behalf of the leadership of the Polish–Nigeria Business Council, I extend my sincere appreciation to our partners and members for their continued support and commitment.

We look forward to an impactful and transformative year in 2026.

H.E Chris A. Akomas, PhD, FNIM

Nigeria At A Glance

Nigeria, Africa's largest economy and most populous nation (over 220 million people), spans 923,768 sq. km across 36 states and the Federal Capital Territory, Abuja. Blessed with diverse resources, Nigeria is a global leader in petroleum and natural gas production, alongside agricultural exports like cocoa, sesame, cassava, and palm oil. Its dynamic private sector and youthful population make it a prime destination for investment.

Nigeria-Poland Diplomatic And Economic Relations

Historical Ties

Nigeria and Poland established diplomatic relations in the 1960s, with cooperation growing through shared commitments to multilateralism and economic development. Poland's accession to the EU in 2004 expanded opportunities for trade and cultural exchange.

Bilateral Trade And Investment

Trade Volume:

Nigeria-Poland trade reached $250 million in 2023, with Nigeria exporting crude oil, cocoa, and rubber, while importing machinery, electronics, and agricultural equipment from Poland.

Key Opportunities: Polish investment in Nigeria's sectors:

- Agriculture (agro-processing, irrigation technology)
- Mining (solid minerals exploration)
- Renewable Energy (solar/wind partnerships)
- ICT (startup collaborations, outsourcing)
- Compressed Natural Gas (CNG)

Key Reform Impacts on Foreign Investment:

- **Foreign Exchange Market Unification:** Relaxing FX controls has eased repatriation concerns, increasing investor interest in Nigerian securities
- **Solid Minerals Sector Revamp:** The insistence on local value-addition has attracted over $800million in investment for processing plants (e.g., lithium refinery projects) by May 2025.
- **Digital and Tech Growth:** Foreign direct investment in the digital economy rose significantly, with a planned $2 billion fiber optic project boosting high-speed internet infrastructure.
- **Increased Investor Confidence:** The reforms have led to improved fiscal discipline, with foreign portfolio investor asset purchases exceeding $1billion in February 2024.
- **Energy Sector Commitments:** The administration's focus on stability and a business-friendly environment at CERAWeek led to significant oil and gas investment discussions
- I**nvestment Commitments:** Tinubu's economic policies have been credited with driving global confidence, leading to substantial investment promises, including over $17 billion in potential foreign investments.
- **Financial Integrity:** Exiting the Financial Action Task Force grey list improved international perception.

Note: This information is based on reports up to early 2026, including data from the national newspaper and the state house.

Sesame Seed In Nigeria

Why You Should Invest in Nigeria?

Young, Skilled Workforce

Young and skilled workforce with 41% of the 250 million strong population between 18 and 15years, improving labour productivity and over 600,000 fresh graduates every year; the economy is equipped with youthful intelligence and talent.

High urbanization rate & growing middle class

With 54% of the population already in urban areas and projected to reach 70%, Nigeria continues to

experience rapid urbanisation and structural transformation. Alongside this trend, real household spending is expected to grow at 3% year-on-year in the coming years, reinforcing the country's position as one of the fastest-urbanising nations globally.

Vibrant financial systems:

Nigeria is a key financial hub in Africa, hosting 4 of the continent's top 20 banks with a combinedasset base exceeding US$84 billion. The Nigerian Exchange (NGX), with a market capitalisation of US$49.56 billion, is the fourth largest in Africa, reinforcing the country's position as a dynamic

investment destination.

Improving business conditions

Haven implemented strategic measures to address macroeconomic challenges, yielding notable outcomes across various sectors, a sustained focus is anticipated to further enhance the nation's macroeconomic stability and security landscape.

Abundant land & natural resources

Nigeria has 34 million hectares of arable land for tropical and temperate agriculture, Africa's largest gas reserves (5.94 trillion m^3, 3% of global reserves), and 44 commercially viable minerals, offering

vast investment and growth opportunities.

Largest market in Africa

Nigeria has the largest market in Africa and was the first African economy to surpass half a trillion dollars in GDP. With an internal market of over 250 million people and unrestricted access to the rest of the continent through the African Continental Free Trade Area (AfCFTA) – a market valued at over US$3.4 trillion in GDP and 1.4 billion people, projected to reach US$6.7 trillion in consumer spending by 2030 – Nigeria stands as the catalyst for Africa's economic transformation.

Strategic location within the continent

Nigeria is strategically positioned with land borders connecting West and Central Africa, and well-integrated into global trade networks through five international airports, major seaports, and extensive trade routes, ensuring seamless access to Asia, Europe, and the Americas.

Big cluster of large companies

Nigeria is home to 23 companies with annual revenues exceeding US$1 billion, making it the third-largest cluster of large companies in Africa. The country has a competitive edge in key industries such as cement, energy,

Proudly Nigerian Cultural Dancers.

telecommunications, and the fast-food industry.

Government Incentives and Reforms

Investors benefit from tax holidays, special economic zones, export incentives, and business-friendly policies.

Booming Technology & Startup Ecosystem

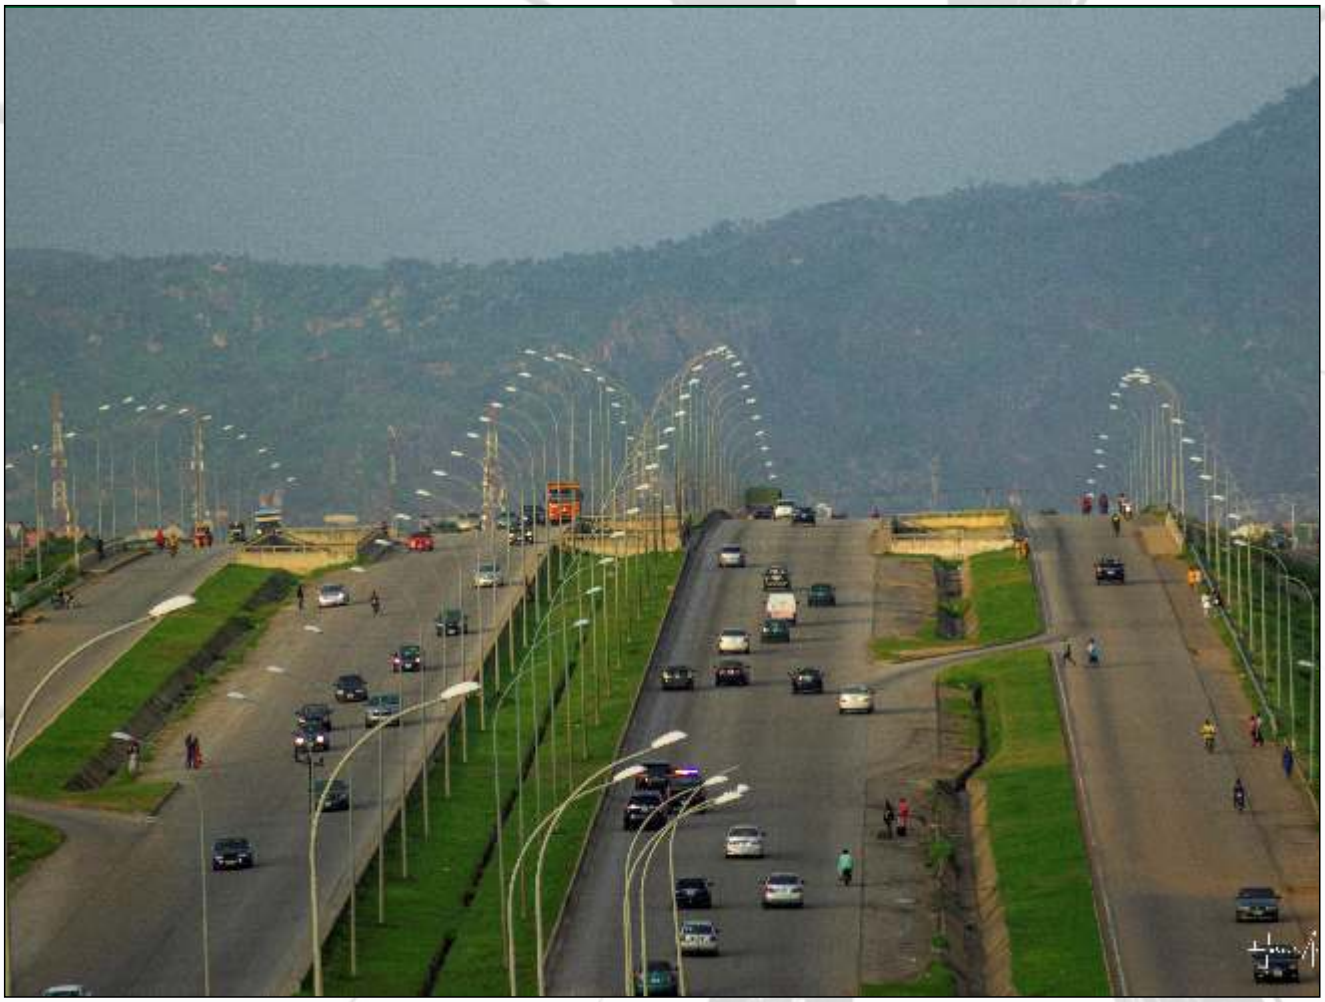

Nigeria is home to Africa's largest tech hub, Lagos, and a thriving ICT sector that has produced multiple unicorns, tech startups valued at over US$1 billion.

The country's fast-growing fintech landscape continues to attract significant global venture capital, reinforcing Nigeria's position as a leading hub for digital innovation and entrepreneurship on the continent.

Poland.
Business Forward

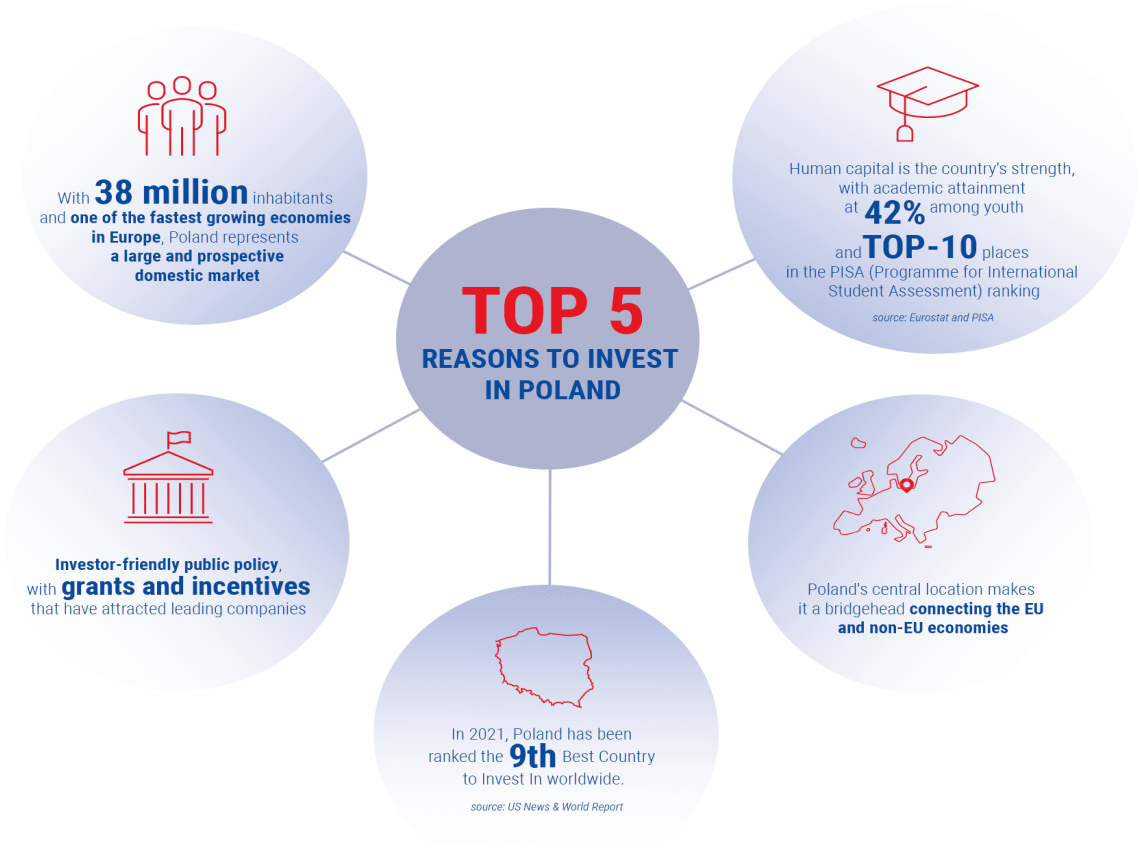

Why You Should Invest in Poland?

Poland is one of the economically most stable and fastest growing countries in Europe. While Poland is not a formal member of the G20, it is a highly advanced and rapidly developing economy within Europe. As a member of the European Union (EU) and the OECD, Poland is regularly included in G20-related consultations and broader engagement frameworks, reflecting its growing economic significance and influence in international affairs."

According to the **Polish Investment and Trade Agency (PAIH)**, Poland at the end of 2020 was ranked as the third preferred location in Europe for foreign investments. In 2020, it had nearly 200 foreign investments for a total value of EUR 10 billion.

Companies choose Poland because of its sound institutional system and stable political environment, strong human capital, central location, large domestic market (the largest in Central-Eastern Europe), and investment-friendly policy, which includes a system of incentives available for foreign investors. In fact, the newestt ranks Poland as a country with the fifth-lowest effective tax rate for innovative companies in the EU. The World Bank Group places Poland at the 40th position overall in its "Doing Business 2020", higher than most of the other CEE countries and at the very first place in the "Transport across borders" category. A vast majority (94 percent) of investors who responded to the " survey for 2019 (available in Polish), carried out by PAIH, Grant Thornton and HSBC, declare they are glad they have invested in Poland and would do it again.

Poland has a strong position on the list of business-friendly places. Revenues earned by foreign investors in Poland have been continuously rising. According to the newest , they exceeded EUR 19 billion in 2020, more than twice the figure recorded a decade ago. In 2020, the United Nations Conference on Trade and Development ranked Poland the second in Europe and fifth globally in terms of the value of greenfield investment: USD 24.3 billion.

Basic Information About The Country

With almost 38 million citizens, Poland is the largest Central-Eastern European country. It shares its borders with 7 other countries (moving counter-clockwise: Germany, Czechia, Slovakia, Ukraine, Belarus, Lithuania, Russia) and the Baltic Sea. Its official name is the Republic of Poland.

The largest city of Poland is its capital Warsaw, which also serves as the financial and business hub of this part of Europe. Other major cities include Kraków, Łódź, Wrocław, Poznań, Gdańsk, and Szczecin as well as Silesian conurbation centred around Katowice.

Poland is a unitary state: except for very specific local regulations, the same legal regulations apply in the whole country. Poland is a member state of many international organisations, such as the European Union, World Trade Organisation, United Nations and Organisation for Economic Cooperation and Development. It was a founding member of the United Nations in 1945 and since 1997 is also a member of the North Atlantic Treaty Organization.

Economic Environment And Infrastructure

Poland has a strong domestic market, low private debt, and one of the lowest unemployment rates in the European Union. It has its own, free-floating currency, the złoty (1 PLN ≈ 0.24 USD). The economy is diversified and not dependent on any single export sector. The rating agencies Fitch and Standard & Poor's rate Poland at A- with a stable outlook.

In 2020, Polish GDP (measured by the purchasing power parity) totalled USD

1,363 trillion, which, according to the World Bank, ranked the country as the 19th largest economy in the world. The Rating agency Standard & Poor's predicts that Polish GDP will expand by 3.6% this year. The European Commission is even more optimistic, estimating the GDP growth rate to reach 5.5% in 2022, which would place Poland among the fastest-growing countries on the continent.

Poland, due to its strategic, central location in Europe, is an important transport hub. Seaports are located all along Poland's Baltic coast. Most freight operations use harbours in Świnoujście, Szczecin, Gdynia and Gdańsk. Over the past years, the country has also accomplished a major overhaul of its road and railroad network, and further improvements are in progress

Poland also has a well-developed digital infrastructure and office landscape. Knowledge of English at a professional working proficiency is customary for the office workforce.

European Union and its single market

Poland is a member state of the European Union (EU) and part of the EU single market. As a result, investing in Poland means that you gain access to a 446-million-consumer market for your company.

The EU member states share a single market, a single external economic border, and a single external trade policy within the World Trade Organisation (WTO), where the rules of international trade are negotiated and enforced. The EU is deeply integrated with other global markets. It maintains an open trade regime and protects intellectual property rights.

Investors will also benefit from the fact that Poland is a part of the Schengen Area. Within the Area, EU citizens as well as non-EU citizens (as long as their stay is legalised) can move freely without border controls. It makes doing business easier for investors, employees, and contractors, and it facilitates cross-border trade.

Furthermore, Poland is a member state of the **European Economic Area** (the EEA). This zone consists of the member states of the European Union and three countries of the **European Free Trade Association** (EFTA) – Iceland, Liechtenstein, and Norway. The Agreement on the EEA seeks to strengthen trade and economic relations between the contracting parties. It allows for free movement of goods, services, and capital between the member states. This means that Poland connects the perfect environment for production process, good infrastructure and access to Western customer base.

What to Invest In?

Almost all market sectors in Poland are open for business and offer attractive investment opportunities. These include services, manufacturing, food and agriculture, high-tech and specialised industries – all these market sectors in Poland are open for business and offer attractive investment opportunities, too. In some cases, special requirements on safety and quality may apply, for instance periodical control of safety of food production and processing. For certain types of activities, such as mining, trading of fossil and fuels or public transport, licences are needed. Polish companies benefit not only from the growing wealth of the domestic consumers: they are also the 20th largest exporter of goods and services in the world.

The public sector also offers investment opportunities. All public procurement above a certain threshold is required to be organized by way of public tenders. As a result, companies from the entire EU can bid on the same terms as the Polish ones for large and small projects, whether for delivery of goods or services. Any procurement of the value above PLN 130 000 (c.a. EUR 30 000) Procurement above the following thresholds: EUR 139 000 for most services and deliveries, EUR 428 000 for the energy production and transport, and EUR 5 350 000 for construction works must be published .

Furthermore, various forms of private-public cooperation can be established for the provision of communal services (e.g. waste collection, energy supply, parks and recreation services), often offering compelling investment opportunities.

People in Poland

Human Capital

Human capital is among the country's strongest assets. Academic-level education is prevalent: in 2020, the percentage of people aged between 25 and 34 who graduated from higher education was 42.4%. Polish teenagers regularly place in the top 10 of the PISA ranking, the world's most comprehensive study of 15-year-old students' scholastic performance in mathematics, science, and reading.

Part-time degree courses as well as professional and postgraduate trainings are relatively inexpensive, accessible, and popular among professionals. This makes developing back offices tailored to your needs easier and more cost-effective than in many Western countries.

One profession Poland is particularly well-known in the world for is its IT crowd. Polish programmers, graphic designers, and IT technicians have grown to become a world-wide known brand, as testified by a large number of Polish brands in the video game industry. Moreover, e-commerce is growing much faster in Poland than in many other EU countries, according to 300Research and ImpactCEE. According to the newest Santander Bank

Technology and IT Industry in Poland in 2025

data, the sector grew by 30% in 2021, and the growth rate is expected to reach up to 40% in the next 10 years.

International companies frequently choose Poland as the location of their back offices or outsourcing services. Labour force in Poland is highly qualified. At least 40% of Polish citizens know at least one foreign language. Therefore, business service centres (BSC) are widespread in major Polish cities. Kraków, the second-biggest city in Poland, is the leader in terms of employment in this sector, with nearly every fourth person employed in the BSC's in Poland working in Kraków.

Whether you think about outsourcing your accounting, HR or customer service activities, you should consider Poland. Especially for the European companies, none or minimal time zone difference could also be a strong advantage.

Consumers

Demographics:

According to the 2021 census, Poland had a population of over 38.1 million. Its population has been ethnically homogeneous for many years. However, this situation is now changing, with a considerable migration influx. The number of migrant workers, according to official statistics, is estimated to be as big as 1.27 million. A large part of them comes from Ukraine. According to the public Social Security Institution data, there are 850 000 legal residents of Ukrainian nationality living in Poland. There is also a big inflow of immigrants from

Aircraft Parts Manufacture plants

Belarus. But smaller groups of people come to Poland from all around the world. The market is of course responding and the range of services dedicated specifically to migrants is emerging.

Population density is higher in the southern area around Kraków and Katowice and in the central area around Warsaw and Łódz, with an extension to the northern coastal city of Gdańsk.

In 2018, the average life expectancy was 77.9 years (74.1 for men and 82 for women). Like many most developed nations, the Polish population is ageing. In 1950, the median age was 25.8, while today it is 38.2. If current trends continue, it may reach 51 by 2050.

There is a very strong Polish diaspora around the world. In 2015, it was estimated that around 2.4 mln Polish citizens lived abroad at least for a while, most of them in Europe. Among the EU countries, the largest number of

people remained in the United Kingdom (720,000), Germany (655,000), the Netherlands (112,000), Ireland (111,000), and Italy (94,000). A strong Polish minority is present in the territories of contemporary western Ukraine and Belarus, eastern Lithuania, eastern and central Latvia, and northeastern Czech Republic.

Income Level And Lifestyle

As of 2020, 60% of the Polish population lives in urban areas. This number is slowly decreasing, as people are moving to suburban and rural areas. However, the percentage of people working in agriculture is decreasing as well. At the same time, the majority of the biggest cities in Poland record growth of their population, too.This means that the current trend is to move to a metropolis or suburbs, rather than live in a mid-size town. As in many

CNG / LPC Kits from KME Auto gas System Poland

Best Exporting Goods.

countries, it reflects both the lifestyle changes and the income differences.

In 2019, the level of the average monthly disposable income per person, rounded to PLN 1, was PLN 1,819 (around 400 EUR or 475 USD). The average monthly expenditure per capita in households in 2019 amounted to 1,252 PLN. Expenses on consumer goods and services amounted to PLN 1201.

As per the OCED data, the yearly average net disposable household income in 2020 was around USD 24,220 (gross adjusted value). This ranks Poland as number 27 on the OECD list, above such countries of the CEE region as Russia and Hungary.

The demand for inexpensive goods and services in Poland is very high. Both chain and local retailers that offer low cost products, frequently used or imported from Asia, are very popular. However, the overall economic level of the population is growing. It is also true when it comes to the wealthiest part of the population. it has been estimated that the number of millionaires in Poland will be growing at the fastest pace in the world in the next few years.

Therefore, the luxury goods market is bound to expand as well.

It is also worth to notice, that Poland is an excellent test-market for technological innovations. As surveys and studies on consumer engagement and attitudes show, the Polish population has much more early adopters than average 13.5%. According to A. Jasiulewicz and M. Lemanowicz study from 2016, there are more than one third of early adopters among Polish citizens, especially in young generations.

The most representative examples of Polish export goods are car and **machinery parts, and food,** to name just a few. Components or entire vehicles dedicated to every type of transportation are manufactured in Poland and exported. The sectors of **rail transport, yachts and boats, aviation and even equipment and technologies required for space exploration** are included. Industrial machinery and IT equipment polish production doesn't end here.

When it comes to technologically advanced products, **professional electronics, space exploration technologies** and **high-tech products from the field of security or dual-use goods** must be mentioned. Poland is also the country where a wide range of **medical aid products** come from. This include **pharmaceuticals, medical dressings and medical devices** like prosthetics, hearing aids or surgical equipment.

When it comes to more traditional products, the **agri-food** sector remains a strong point on the map of Polish exports. The value of domestic exports of products from this sector in 2024 amounted to EUR 53.5 billion. **Fresh, frozen and cured meat** (especially poultry, where Poland remains an EU leader since 2014), **fish, dairy and milk** are currently the most important export products from this sector. Among fruit and vegetables, Polish export hits are **fresh mushrooms, onions and apples.** The country is also renowned for the food cupboard or convenience products like **pasta or sweets.** Polish prepared food, eg. **deep-frozen bakery goods** are bought by the HoReCa enterprises in the whole Europe.

In the past, the traditional Polish export goods were **textiles and clothing.** This continues to this day, though it is not only clothes made in Poland that are being imported and sold by both luxury and chain retailers. Original Polish brands, offering **clothing, shoes, jewelry and accessories** garner more and more attention from fashion lovers around the world. And since we are on the topic of fashion and trends, with consumers becoming increasingly eco-aware, Polish **zero waste, bio or organic products** like cosmetics can be a path to success. This seems especially true in case cosmetics. Many Polish companies offer top-quality products certified with widely recognized Ecocert of Cruelty-free labels.

Speaking of cosmetics, whether in their eco or traditional renditions, the whole **chemical industry** sector needs to be mentioned. **Toiletries, house cleaning products, fertilizers or packaging** – all of these are manufactured in Poland by producers with decades of experience.

Poland is also a European leader in the production and export of **household appliances.** Some Polish companies from this sector have been active in their field for over seventy or even ninety years!

Do you prefer bottles made of glass rather than plastic? Opt for famous Polish **glassware and handmade ceramics** You will find brands that have reached an applied art icon status. More importantly, they are already present in multiple markets abroad. Polish glassware producers offer both casual and premium lines, as well as products addressed specifically to the HoReCa sector.

Another example is **furniture and wood products** such as windows or doors. Polish window producers are known for their value for money, and Poland is currently a top exporter of this commodity.

Key Export Services

Poland is well-known for its IT professionals. Polish **programmers, computer graphic designers and computer technicians** have grown to become a world-renowned brand. Interestingly enough **e-commerce i**n Poland is growing at a much faster pace than in many other EU countries, according to 300 Research and Impact CEE.

The other type of activity that requires highly qualified staff and good infrastructure is of course **R&D**. Number of the R&D companies has grown by more than a half from 2016 to 2024. Polish population is well educated. In

2020, the percentage of people aged between 25 and 34 who graduated from higher education was 42.4%.

This places it above the EU average. In many Polish municipalities you will find **industrial and technological parks** that play a role of local R&D centers. These centers are dedicated to cooperation with business. In the financial terms, the ratio of amount spent by all sectors on R&D in relation to GDP is growing, reaching an all-time high in 2023. The share of private companies in the expenditure doubled across the period of 10 years (from 2008 to 2018) and in 2023 amounted to roughly 63%. And if you are looking for any type of design, you do not have to search far. Polish design studios, whether specializing in **graphic design, architectural projects or artistic installations** of various kinds, are worldwide known.

When talking about architecture, one cannot forget about Polish **construction** workers. The consultancy Deloitte indicates that the largest Polish construction groups already are present in the East European, German and Scandinavian market. The sector, however, has a big potential for widening its presence in the foreign countries. Polish **logistics** companies are also worth recommending. Not only because of the competitive prices, but also because of the central location of Poland in Europe and at the border of the Schengen Area.

NIGERIA–POLAND BILATERAL INVESTMENT PROPOSAL (2026–2035)

Bridging Africa's Largest Market with Europe's Fastest-Growing Industrial Gateway

1. Executive Summary

This proposal establishes a structured investment partnership between the Federal Republic of Nigeria and the Republic of Poland, aimed at unlocking mutual economic growth, industrial expansion, and trade integration.

The partnership will:

- Channel Nigerian capital into Poland's infrastructure, energy, and manufacturing boom
- Position Nigeria as Poland's strategic trade and investment hub in Africa
- Facilitate technology transfer, job creation, and export growth

Target Investment Envelope:

$5 billion – $15 billion (₦7.5 trillion – ₦22.5 trillion) over 10 years

2. Strategic Rationale

Why Poland?

- Fast-growing EU economy and gateway to 500M+ consumers
- Massive investment cycle in infrastructure and energy transition
- Strong legal framework and EU-backed funding access

Why Nigeria?

- Africa's largest market (200M+ population)
- Strategic location for West African trade
- Expanding middle class and industrial base

3. Core Investment Pillars

Pillar 1: Infrastructure & Logistics Corridor

Objective: Position Nigeria–Poland as a two-way trade corridor

Poland (Inbound Nigerian Investment):

- Roads, rail, and logistics parks
- Dry ports and warehousing hubs

Nigeria (Polish Investment):

- Inland container depots
- Smart logistics hubs (Lagos, Abuja, Port Harcourt)

Outcome:

- Reduced trade costs
- Faster Africa–Europe goods movement

Pillar 2: Energy & Industrial Power Development

Objective: Secure long-term energy and industrial capacity

Poland:

- Renewable energy (wind, solar, storage)
- Gas infrastructure and energy services

Nigeria:

- Mini-grid and renewable expansion
- Gas-to-power and industrial energy parks

Outcome:

- Stable returns for investors
- Energy security in both markets

Pillar 3: Manufacturing & Industrial Cooperation

Objective: Build a dual-continent production system

Key Sectors:

- Automotive components
- Agro-processing

- Chemicals & light manufacturing

Structure:

- Polish factories → EU exports
- Nigerian factories → African market

Outcome:

- Increased exports

- Job creation in both countries

Pillar 4: Technology, Innovation & Digital Economy

Objective: Drive digital transformation and tech exchange

Focus Areas:

- Fintech and digital payments
- AI and business process outsourcing
- Cybersecurity and e-governance

Outcome:

- Nigerian tech access to EU markets
- Polish firms access African digital growth

Pillar 5: Agriculture & Food Security Partnership

Objective: Strengthen food systems and agro-trade

Opportunities:

- Mechanized farming in Nigeria
- Food processing and storage
- Export of Nigerian agro-products to Europe

Outcome:

- Food security
- Export diversification

4. Investment Structure

Public-Private Partnership (PPP) Model

- Government-backed frameworks
- Private sector-led execution

Special Purpose Vehicles (SPVs)

- Project-specific investment vehicles
- Joint ownership (Nigeria–Poland investors)

Sovereign & Institutional Participation

Sector	Investment Allocation	Expected ROI
Infrastructure	30%	12–18%
Energy	25%	10–15%
Manufacturing	20%	15–22%
Technology	15%	20%+
Agriculture	10%	12–18%

- Nigerian sovereign funds
- Polish development finance institutions

- Multilateral partners (e.g., EBRD, AfDB)

5. Policy & Institutional Framework

Proposed Agreements:

- Bilateral Investment Treaty (BIT)
- Double Taxation Avoidance Agreement (DTAA)
- Trade facilitation and customs cooperation

Coordinating Bodies:

- Nigeria–Poland Investment Council
- Joint Economic Commission

6. Financial Model (Indicative)

7. Implementation Roadmap

Phase 1 (0–12 Months)

- Diplomatic engagement and MoU signing
- Establishment of investment council
- Identification of priority projects

Phase 2 (1–3 Years)

- 1infrastructure and energy investments

Phase 3 (3–10 Years)

- Expansion of industrial zones
- Scaling manufacturing and trade flows
- Full corridor integration

8. **Risk Mitigation**

- Political risk insurance (e.g., MIGA)
- Currency hedging mechanisms
- Strong legal and arbitration frameworks

9. Expected Impact

Nigeria

- Job creation (100,000+ jobs)
- Industrial growth
- Increased exports

Poland

- Increased foreign direct investment
- Expanded trade footprint in Africa
- Strengthened global supply chains

10. Conclusion / Investment Call

This proposed Nigeria–Poland partnership represents a rare convergence of opportunity—linking Africa's largest economy with Europe's most dynamic industrial hub to create a powerful, future-ready economic corridor.

CNG Oil & Gas Station

INTRODUCTION

The Polish–Nigeria Business Council (PNBC) was established to strengthen economic, cultural, and educational relations between Poland and Nigeria. Over the past two years, the Council has positioned itself as a key platform for facilitating dialogue between businesses, investors, and government institutions in both countries.

Nigeria represents one of Africa's largest markets, with a population exceeding 200 million people and a rapidly growing entrepreneurial ecosystem. Poland, on the other hand, is one of Europe's fastest-growing economies and serves as a gateway to the European Union market.

The **2026 Strategic Plan** is designed to expand bilateral trade, attract investments, promote cultural exchanges, and deepen institutional partnerships between the two countries.

2. Vision

To become the leading platform for trade, investment, and strategic cooperation between Poland and Nigeria.

3. Mission

To facilitate sustainable economic partnerships by connecting businesses, governments, and institutions in Poland and Nigeria through trade promotion, investment facilitation, cultural exchange, and knowledge sharing.

4. Strategic Objectives

The Council will pursue the following strategic objectives in 2026:

i. **Promote bilateral trade between Poland and Nigeria**
ii. **Facilitate investments in key sectors**
iii. **Expand membership and institutional partnerships**
iv. **Promote cultural and educational exchanges**

PNBC Directors At A Polish Exhibition Stand In Lagos Recently

v. **Strengthen the Council's visibility and influence**

5. Key Priority Sectors

The Council will focus on sectors with strong bilateral opportunities:

Agriculture and Agro- processing

- Farm mechanization
- Food processing technology
- Agricultural exports

Manufacturing and Industrial Development

- Machinery production
- Industrial equipment
- Automotive components

Energy and Renewable Energy

- Solar energy
- Energy infrastructure
- Gas and power technology

Infrastructure Development

- Construction technology
- Smart cities development
- Transport infrastructure

Technology and Innovation

- ICT development
- Digital solutions
